

# TEJESWARA SAI APPIKATLA

Delray Beach, FL | +1 (561) 599-4577 | [atejeswarasaia@gmail.com](mailto:atejeswarasaia@gmail.com) | [Portfolio](#)

---

## PROFESSIONAL SUMMARY

- Data Analyst with 3+ years of combined analytics experience supporting product, operational, executive, academic, and data quality reporting across U.S. business and university environments.
- Experienced in building dashboards, automating recurring reports, validating complex datasets, and turning performance metrics into clear insights for business and leadership teams.
- Strong background in product engagement, retention, churn, KPI reporting, statistical analysis, data reconciliation, and root-cause analysis, with a focus on accurate and decision-ready reporting.
- Known for working effectively with product managers, engineers, operations teams, faculty, and business stakeholders to clarify reporting needs, resolve data issues, and communicate findings in a practical, understandable way.

---

## TECHNICAL SKILLS

**Business Intelligence and Visualization:** Power BI, Power BI Service, DAX, Power Query, Data Modeling, Tableau, Dashboard Development, Scheduled Refresh, Drill-Through Reporting, Executive Reporting, KPI Scorecards, Data Visualization, Data Storytelling

**SQL and Data Platforms:** SQL, PostgreSQL, MySQL, Google BigQuery, Complex Joins, Common Table Expressions, Window Functions, Subqueries, Aggregations, Query Optimization

**Data Analysis and Programming:** Python, Pandas, NumPy, Advanced Excel, PivotTables, XLOOKUP, Exploratory Data Analysis, Automated Reporting

**Product and Business Analytics:** KPI Definition, Product Metrics, User Engagement, Retention Analysis, Churn Analysis, Cohort Analysis, Funnel Analysis, Customer Segmentation, Feature Adoption, Marketing Analytics, Financial Reporting, Variance Analysis, Trend Analysis, Operational Analytics

**Statistical and Predictive Analytics:** Statistical Analysis, Hypothesis Testing, Regression Analysis, Classification Analysis, Predictive Modeling, SciPy, scikit-learn, Anomaly Detection

**Data Preparation and Quality:** ETL, Data Extraction, Data Cleaning, Data Transformation, Data Mapping, Data Profiling, Data Validation, Source-to-Report Reconciliation, Deduplication, Fuzzy Matching, Root-Cause Analysis, Business Rules, Data Integrity, Data Governance

**Cloud and Analytics Delivery:** Google Cloud Storage, Google Cloud Functions, REST API Integration, Git, Requirements Gathering, Stakeholder Management, Metric Standardization, Technical Documentation

---

## PROFESSIONAL EXPERIENCE

### Data Analyst

Apr 2026 – Present

Talviro Inc. | Remote | Miami, FL

- Built 12+ production dashboards in Power BI and Tableau using DAX, Power Query, data modeling, and drill-through analysis, giving operations and leadership teams a reliable view of KPIs and reporting exceptions.
- Gathered requirements from 40+ business and technical stakeholders and translated them into dashboard specifications, executive reports, validation rules, and metric definitions aligned with operational priorities.
- Automated recurring reports through SQL, Power BI Service, scheduled refreshes, and reusable reporting models, cutting manual preparation time by 27% and accelerating access to current performance data.
- Tuned PostgreSQL and MySQL queries using complex joins, common table expressions, window functions, subqueries, aggregations, and query optimization, enabling faster refreshes and more stable downstream reporting.
- Implemented source-to-report reconciliation, data profiling, and root-cause analysis controls that sustained 98% reporting accuracy and stopped transformation defects before dashboard publication.
- Standardized KPI calculations, reporting hierarchies, filters, and business rules with operations, finance, and engineering teams, creating consistent measures across functional and executive reports.
- Investigated operational variances and recurring process gaps through SQL, Tableau, and exploratory data analysis, directing business teams toward the exceptions requiring immediate corrective action.
- Formalized data dictionaries, refresh dependencies, dashboard logic, validation procedures, and troubleshooting guides, strengthening reporting governance and supporting confident self-service analytics.

### Product Data Analyst

Jul 2025 – Apr 2026

BIOME | Remote

- Designed product analytics dashboards in Power BI with SQL, DAX, Power Query, and data modeling, giving 15+ stakeholders visibility into engagement, retention, churn, and feature-adoption behavior.
- Created a Python and Pandas mapping engine with fuzzy matching, data cleaning, and business rules, reconciling inconsistent product identifiers and producing trusted records for operational analysis.
- Built Python data extraction and ingestion workflows with Google Cloud Storage, data validation, and anomaly detection, decreasing data errors by 35% and preventing incomplete records from entering reporting datasets.
- Automated data preparation, reconciliation, and exception reporting through Python, SQL, and Pandas, saving 10+ engineering hours each week and shortening delivery cycles for analysis-ready data.
- Combined information from 4 operational sources through SQL transformations, data mapping, and metric standardization, establishing a unified reporting layer for product and supply chain teams.
- Conducted cohort, funnel, retention, churn, segmentation, and feature-adoption analysis with SQL and Python, helping product managers identify behavioral patterns and refine customer-focused priorities.
- Structured reusable SQL datasets and DAX measures for recurring product metrics, eliminating conflicting calculations and supporting consistent performance reviews across business functions.
- Managed stakeholder requirements across product, engineering, and business teams, validated dashboard outputs, controlled Python and SQL changes through Git, and documented analytical assumptions to support practical roadmap decisions.

- Built a Python and Advanced Excel performance-tracking system for 150+ students using Pandas, PivotTables, and XLOOKUP, giving faculty clear visibility into assignment progress and learning gaps.
- Led 12+ hands-on labs covering Python, NumPy, statistical analysis, exploratory data analysis, and data visualization, helping students apply analytical methods to structured datasets.
- Created 25+ reusable notebooks with Pandas, SciPy, and scikit-learn for data cleaning, hypothesis testing, regression, and classification, providing repeatable workflows for coursework and project analysis.
- Evaluated student projects through SQL validation, data profiling, statistical analysis, and data storytelling, helping learners produce accurate findings and clearly supported recommendations.
- Demonstrated Power BI, Tableau, and Advanced Excel techniques for dashboard development and visual reporting, preparing students to communicate analytical findings to non-technical audiences.
- Automated grading consolidation and progress reporting through Python, Pandas, and Advanced Excel, decreasing administrative preparation time by 30% and creating more capacity for targeted student support.

**Data Analyst**

**May 2021 – Dec 2022**

**Agile Solutions | Bangalore, India**

- Integrated SQL and Python analytics into an executive reporting platform with KPI scorecards and visual reports, driving 60% higher leadership adoption and faster access to operational performance indicators.
- Developed a Python and Pandas ETL application with data cleaning, deduplication, anomaly detection, and validation controls, lifting analytical accuracy and data compliance by 45%.
- Automated cloud-based processing through Google Cloud Functions and Google Cloud Storage for 2TB+ of operational data, supplying structured datasets for recurring reporting and predictive analysis.
- Consolidated records from 6 operational sources using SQL joins, common table expressions, data mapping, and transformation rules, creating a dependable foundation for departmental analysis.
- Delivered regression and classification outputs through REST API integrations built with Python, SciPy, and scikit-learn, embedding validated analytical results into existing business applications.
- Applied hypothesis testing, regression analysis, classification analysis, and anomaly detection to operational datasets, converting statistical patterns into clear findings for risk and process planning.
- Organized SQL-based reporting datasets around standardized metrics and business rules, enabling management teams to compare operational results without relying on conflicting source calculations.
- Collaborated with engineering, operations, and management teams on requirements gathering, data validation, metric standardization, and technical documentation, keeping analytics deliverables tied to defined business objectives.

---

**PROJECTS**

**Marketing Campaign and Customer Conversion Analytics**

- Consolidated campaign spend, customer interactions, conversions, and revenue in Google BigQuery using SQL and Power Query, creating a consistent dataset for channel and audience analysis.
- Applied Python, Pandas, customer segmentation, funnel analysis, and statistical analysis to compare acquisition behavior, identify conversion drop-offs, and assess campaign performance.
- Built Power BI dashboards with DAX measures, KPI scorecards, and drill-through views, enabling marketing teams to evaluate conversion rates, customer value, and channel effectiveness.

**Financial Variance and Performance Reporting Dashboard**

- Structured budget, actual, expense, and revenue records with SQL and Advanced Excel, standardizing financial categories and preparing reconciled data for monthly performance reporting.
- Developed DAX calculations and Power BI data models for budget variance, period-over-period trends, operating costs, and revenue performance, giving finance teams consistent analytical measures.
- Presented financial trends through Power BI and Tableau dashboards with executive reporting and data storytelling, helping stakeholders identify material variances and investigate underlying business drivers.

**Operations Capacity and SLA Performance Analytics**

- Consolidated service requests, staffing levels, workloads, and resolution records through SQL and Power Query, creating an analysis-ready model for capacity utilization, backlog, and SLA reporting.
- Developed DAX measures and Power BI views for request volume, aging, turnaround time, workload distribution, and SLA exceptions, helping operations teams identify bottlenecks and rebalance resources.
- Reconciled dashboard totals against source records using Advanced Excel and source-to-report validation, strengthening reporting accuracy and supporting dependable weekly capacity planning.

---

**EDUCATION**

**Master of Science in Computer Science**

**2023 – 2025**

Florida Atlantic University | Boca Raton, FL

---

**CERTIFICATIONS**

- Microsoft Power BI Data Analyst Professional Certificate - **Coursera**
- Google Data Analytics Professional Certificate - **Coursera**
- SQL (Advanced) Skills Certification - **HackerRank**
- Python for Data Science - **IBM**
- Data Analysis with Python - **Cognitive Class AI**
- Data Visualization with Python - **Coursera**
