

PAVAN KUMAR

Celina, TX (Open to Relocate) | +1 (314) 599-0774 | sai.naga@applywizard.ai | [Portfolio](#)

PROFESSIONAL SUMMARY

- Data Analyst with 4+ years of experience supporting reporting, performance analysis, KPI tracking, and operational decision-making across financial services, healthcare, and technology environments.
- Experienced in turning service, incident, capacity, customer-support, and business data into clear dashboards, scorecards, and reports that help leaders understand performance and act on emerging issues.
- Skilled in gathering reporting requirements, defining meaningful metrics, validating data, and working with cross-functional teams to deliver accurate and practical business insights.
- Strong background in operational reporting, trend analysis, data quality, executive reporting, and process improvement, with a consistent focus on making information easier to understand and use.
- Brings a balanced mix of analytical thinking, business communication, and hands-on reporting experience, with the ability to support both day-to-day operations and leadership-level decision-making.

TECHNICAL SKILLS

Data Analysis: Exploratory Data Analysis, Trend Analysis, Variance Analysis, Root-Cause Analysis, Data Validation, Data Reconciliation

Business Intelligence and Visualization: Power BI, Tableau, Power BI Service, Interactive Dashboards, Executive Dashboards, KPI Scorecards, Drill-Through Reporting, Data Storytelling

Power BI and Tableau Development: Power Query, DAX, Data Modeling, Semantic Models, Measures, Calculated Fields, Parameters, Filters, Dashboard Actions

SQL and Databases: SQL, Joins, Subqueries, CTEs, Aggregations, Data Extraction

Python and Automation: Python, Pandas, Data Transformation, Report Automation, Scheduled Reporting

Excel and Reporting: Microsoft Excel, PivotTables, Advanced Formulas, Executive Reporting

Data Modeling and Quality: Dimensional Modeling, Star Schema, Data Dictionaries, Data Quality Checks, KPI Definitions, Data Quality Assurance

Business and Operational Analytics: Requirements Gathering, Reporting Requirements, SLA Reporting, Incident Analytics, Service Performance Reporting, Process Improvement

Tools, Methodologies and Domains: ServiceNow, SolarWinds, Confluence, SharePoint, Stakeholder Management, Cross-Functional Collaboration, Financial Services, Healthcare Operations

PROFESSIONAL EXPERIENCE

Data Analyst

Feb 2025 - Present

VISA | Texas

- Developed 8 Power BI dashboards using SQL, Power Query, and DAX to combine payment operations, service-performance, capacity, and operational risk data, giving financial-services leaders faster visibility into business-critical KPIs.
- Streamlined SQL-based data preparation and validation workflows across operational reporting sources, cutting recurring report preparation effort by 40% while increasing confidence in executive performance reporting.
- Built DAX measures, calculated columns, and interactive drill-through reports to evaluate payment operations, capacity trends, and business performance, enabling leadership to prioritize operational planning with current insights.
- Evaluated more than 500K operational records using Python, Pandas, SQL, and Excel to identify demand patterns, utilization trends, and operational exceptions that guided business decision-making.
- Partnered with product, operations, compliance, and engineering teams to translate reporting requirements into Power BI semantic models, KPI definitions, and executive dashboards aligned with organizational objectives.
- Automated recurring data transformation and scheduled reporting with Python, SQL, Power Query, and Power BI Service, allowing analysts to spend more time interpreting business trends instead of preparing reports.
- Assessed operational trends through variance, capacity, and utilization analysis in Power BI and Excel, supporting planning initiatives that boosted operational efficiency by 25%.
- Maintained KPI documentation, reporting standards, dashboard specifications, and validation rules in Confluence and SharePoint, strengthening reporting governance across analytics teams.

Reporting and Business Intelligence Analyst

Jan 2024 - Oct 2024

Baylor Scott & White Health | USA, Remote

- Built Tableau dashboards supported by Power BI scorecards to compare operational performance across 25 healthcare facilities, helping regional leaders evaluate clinical support and facility-level service trends.
- Combined healthcare operations, ServiceNow, and Excel reporting data through SQL and Power Query transformations, decreasing recurring reporting effort by 25% while creating standardized datasets for enterprise reporting.
- Designed healthcare scorecards with DAX and Tableau calculated fields to monitor patient-support operations, service availability, incident aging, and departmental performance during leadership reviews.
- Explored operational datasets using Python, Pandas, SQL, and Excel to identify recurring service patterns across facilities, contributing to a 40% decrease in average resolution time.
- Produced Tableau visualizations with geographic mapping, parameters, filters, and dashboard actions that enabled regional managers to compare facility performance and identify location-specific service gaps.

- Collaborated with clinical operations, infrastructure, and service-management teams to define reporting requirements and business rules, delivering analytics aligned with healthcare operational priorities.
- Validated healthcare reporting datasets through SQL reconciliation and Power Query quality checks, increasing source-to-report accuracy to 98% before publication through Power BI Service.
- Documented healthcare KPI definitions, reporting logic, dashboard specifications, and governance standards in Confluence and SharePoint, supporting consistent report delivery across BI teams.

Operations Analyst

Jan 2021 - Dec 2022

Cognizant | India

- Analyzed operational workload, ticket backlog, SLA performance, and service metrics in Excel and ServiceNow for environments supporting 2,000+ users, enabling managers to balance workloads and prioritize operational activities.
- Generated Excel scorecards and operational reports from ServiceNow and SolarWinds using SQL and Power Query, lowering recurring report preparation time by 30% across weekly service reviews.
- Retrieved operational data through SQL joins, CTEs, aggregations, and subqueries to evaluate ticket aging, backlog movement, escalation trends, and service-level compliance for support managers.
- Organized ticket categories, ownership groups, timestamps, and operational attributes through Power Query standardization, producing consistent datasets for incident and workload reporting.
- Examined recurring operational issues through Excel trend analysis, SQL reporting, and variance analysis, helping service teams decrease repeat operational issues by 25%.
- Automated recurring operational reporting with Python and Pandas to prepare categorized datasets and scheduled reports, saving 10 hours per week for the operations reporting team.
- Worked alongside service desk managers, infrastructure teams, and business stakeholders to define operational KPIs and reporting requirements, delivering reports that supported workforce planning and daily operations.
- Maintained report specifications, KPI documentation, operating procedures, and reporting standards in Confluence and SharePoint, creating consistent reporting practices across multiple support teams.

PROJECTS

Enterprise Operations Intelligence and KPI Analytics Platform

- Modeled incident, capacity, change, and SLA data in SQL and Power Query using a star schema, creating a reliable analytical layer for enterprise operations reporting.
- Engineered DAX measures, drill-through reports, KPI scorecards, and trend and exception views in Power BI to expose backlog growth, service failures, and capacity risks requiring operational follow-up.
- Automated Python-based validation and reconciliation checks for recurring data loads, increasing dashboard reliability and giving analysts more time for trend and exception analysis.

Healthcare Service Performance and Facility Analytics Dashboard

- Combined ServiceNow, facility, and service-performance data through SQL and Excel validation rules, producing a consistent dataset for healthcare location and departmental comparisons.
- Designed Tableau dashboards with calculated fields, parameters, geographic mapping, filters, and dashboard actions to reveal facility-level service gaps and recurring operational patterns.
- Applied Python and Pandas to examine outliers, incident concentration, and peak service-impact periods, guiding healthcare teams toward better facility planning and corrective action.

Product and Customer Usage Analytics Solution

- Structured customer, product, feature, and usage data with SQL dimensional modeling, supporting consistent analysis of adoption, retention, engagement, and customer-segment performance.
- Developed Python and Pandas workflows to calculate usage frequency, feature penetration, support demand, and customer trends, giving product teams evidence for prioritization decisions.
- Presented cohort analysis, funnel views, segmentation, and KPI trends through Power BI and Tableau, helping stakeholders evaluate adoption barriers and target product improvements.

EDUCATION

Master of Science in Information Systems

Dec 2024

Saint Louis University
